Update VAT control statement lines

Adds or updates the VAT control statement lines register entries.

Update VAT return lines

Adds or updates the VAT return lines register entries.

Update VAT reverse charge codes

Adds or updates the VAT reverse charge codes register entries.

All register updates uses this logic:

The existence of the register entry is verified on the basis of the external Id. If it is not filled in, the code will be used in its place. The whole set is always updated. Entries that are not in the imported list are marked as invalid in the destination list.

Changed interfaces

Documents

Add or update document

New parameter **ignoreLock**: If it is set to true, then it will unlock the document before updating the document, and if it was locked, it will be locked again after the update. The default value is false.

Changed models

Document

Accounting (new): document informations related to accounting is now in the complex **Accounting** object. Except for the **Series** field, which is part of a complex **Type** object.

DoNotPay (new)
